[Flag question](#)

You are a bank account hacker. Initially you have 1 rupee in your account, and you want exactly N rupees in your account. You wrote two hacks, first hack can multiply the amount of money you own by 10, while the second can multiply it by 20. These hacks can be used any number of time. Can you achieve the desired amount N using these hacks.

Constraints:

$$1 \leq N \leq 100$$

```
1  # The function is expected to return an INTEGER.  
5  * The function accepts INTEGER n as parameter.  
6  */  
7  
8  int myFunc(int n)  
9  {  
10     def can_achive(N):  
11         while N % 10 ==0:  
12             N//=10  
13             while N %20 ==0:  
14                 N//=20  
15                 return 1 if N ==1 else 0  
16     T =int(input())  
17     for _in range(T):  
18         N =int(input())  
19         print(can_achieve(N))  
20 }  
21
```

Flag question

Find the number of ways that a given integer, X , can be expressed as the sum of the N^{th} powers of unique, natural numbers.

For example, if $X = 13$ and $N = 2$, we have to find all combinations of unique squares adding up to 13 . The only solution is $2^2 + 3^2$.

Function Description

```
7  * 2. INTEGER n
8  */
9
10 int powerSum(int x, int m, int n)
11 {
12
13     max_num=1
14     powers=[]
15     T=int(input())
16     for_in range(T);
17     x,N=map(int,input().split())
18     printf(find_ways(x,n))
19 }
```
