

Given an array of numbers, find the index of the smallest array element (the pivot), for which the sums of all elements to the left and to the right are equal. The array may not be reordered.

Example

`arr=[1,2,3,4,6]`

· the sum of the first three elements, $1+2+3=6$. The value of the last element is 6.

```
1  /*
2   * Complete the 'balancedSum' function below.
3   *
4   * The function is expected to return an INTEGER.
5   * The function accepts INTEGER_ARRAY arr as parameter.
6   */
7
8  int balancedSum(int arr_count, int* arr)
9  {
10     total_sum=sum(arr)
11     left_sum=0
12     left_sum+=arr[i
13     return 0;]
14
15 }
16
```

Flag question

Calculate the sum of an array of integers.

Example

```
numbers = [3, 13, 4, 11, 9]
```
